lag_pos_rank	Yes	Yes
<i>Fit statistics</i>		
Observations	157,168	89,424
R ²	0.25235	0.56793

Clustered (lag_office_id) standard-errors in parentheses

*Signif. Codes: ***: 0.01, **: 0.05, *: 0.1*

Linear probability models at the worker-year level. The sample is non-drafted workers observed in the prior year; outcomes equal one if the worker is retained and receives a rank promotion or salary raise in year t. Fixed effects: year, prior office-section assignment, prior position, and prior rank. Standard errors clustered by prior office.

Dependent Variables:	promoted Promotion	salary_raise Salary raise
Model:	(1)	(2)
<i>Variables</i>		
Destination draft office	-0.0443*** (0.0110)	-0.0548 (0.0447)
High productivity	-0.0139*** (0.0041)	-0.2459*** (0.0238)
Tenure	0.0070*** (0.0006)	-0.0127*** (0.0029)
Destination draft $\times$ High productivity	0.0668*** (0.0142)	0.0984 (0.0874)
<i>Fixed-effects</i>

Clustered (lag_office_id) standard-errors in parentheses

*Signif. Codes: ***: 0.01, **: 0.05, *: 0.1*

Linear probability models at the internal-transfer level. Destination draft office equals one if the destination office-year had at least one male drafted worker. Fixed effects: year, donor office-section assignment, prior position, and prior rank. Standard errors clustered by donor office.
