

Table 1: Salary and Rank Boosts for Non-Drafted Transferees into Draft-Vacancy Destinations

	High-wage draftee	Low-wage draftee	Low – High
Transferees	155	45	-110
With baseline salary	20	9	-11
Current salary	91.73	57.96	-33.77
Baseline salary	84.40	90.56	6.16
Salary change	-23.45	-50.44	-26.99
Median salary change	4.50	-42.00	-46.50
Log salary change	-0.812	-1.605	-0.793
Share with salary increase	55.0%	22.2%	-32.8%
Position-rank change	0.071	0.156	0.085
Share with position-rank boost	7.7%	26.7%	18.9%
Court-rank change	-0.123	-0.178	-0.055
Share with court-rank boost	0.6%	0.0%	-0.6%

Notes: Sample consists of non-drafted workers who transferred to a draft-vacancy destination office-year with observed drafted-worker salary, using the same destination wage split as Model G. High-wage draftee destinations are office-years where the mean salary of drafted workers is at or above the median among draft-vacancy office-years with observed drafted-worker salary; low-wage destinations are below that median. Salary changes compare current-year salary to the worker's own baseline (lagged) salary, so those rows use only transferees with observed baseline salary. Position rank is coded 1–3 from title hierarchy; court rank is coded 0–8 with higher values indicating higher status. Rank-change rows code missing ranks as 0, matching the MNL convention.
