

Table 1: Transfer Outcomes

	Tenure after	Postwar survival	Postwar years	Rank gain
Panel B: Donor peers	3.7525*** (0.0911)	0.1953*** (0.0052)	0.6345*** (0.0206)	0.1813*** (0.0071)
Panel C: Draft vacancy	1.5513*** (0.2350)	0.0801*** (0.0153)	0.4697*** (0.0649)	0.0304** (0.0137)
Panel A: Dest. peers	2.2992*** (0.0868)	0.1426*** (0.0059)	0.4895*** (0.0208)	0.1348*** (0.0060)
<i>Fixed effects</i>				
Section FE	Yes	—	Yes	
Year / Position FE	Yes	—	Yes	
Donor cell $\times$ year	—	Yes	—	
Donor position FE	—	Yes	—	
Observations	91,586	40,060	97,145	

Notes: Panel B compares transferred workers to peers who remained at the donor office; Panel A compares transferred workers to peers already at the destination office; both control for peer composition (average rank, tenure, female share, log headcount) with section, year, and position FE. Panel C compares transferees within the same donor occupational unit $\times$ year cell by whether the destination had a draft-induced vacancy; FE: donor cell $\times$ year and donor position. Clustered standard errors in parentheses (section for A/B; donor cell for C). *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$.
